

**Ok Moto Headz, photos are worth a thousand words, so let's get to it cuz I wanna ride!! Awesome!**

Item: 1200506

Headz can pop off bodies  
**Note:** If arms or legs come off, pop them back into place.

Swap out headz from other riders.

Clip hands on to handle bars.  
**Note:** Body can be posed in cool positions.

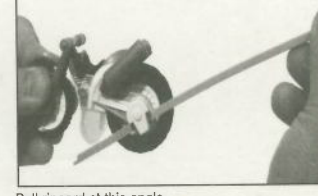

Riders should hang on even upside down.

Carefully slide ripcord end into wheel gear area.  
**Note:** Make sure flat side of ripcord faces outward.

Ripcord pushed all the way down at the correct angle.

Pull ripcord at this angle.  
**Note:** Hold bike and rider with one hand and pull the ripcord with the other. Push start on the ground for better performance.

Kick stand clipped into position for stand-up displaying and smoother performance.

Kick stand can be removed for extra performance.

Use your custom wrench to swap out the exhausts.

Screw goes through exhaust mount and hooks up to the bike.

Use your custom wrench to loosen and tighten the regular rear wheel. Make sure you don't over tighten and check that wheel spins freely.  
**Note:** Turn screw counter clockwise to tighten. Turn screw clockwise to loosen.

Once the screw axle is removed, wiggle rear wheel from rear swing arm.  
**Note:** You may need to slightly open up both halves of the swing arm, ask your parents for help.

With the regular rear wheel removed, slide pro street swing arm into position.  
**Note:** You may need to wiggle while sliding it in.

Insert rear axle screw and carefully tighten.  
**Note:** Do not over tighten.

Socket rider comes with 2 helmets which can be interchanged.

**WARNING:**  
CHOKING HAZARD - Small parts
